Introduction

What is GeyserLogin?¶

GeyserLogin is a Geyser Extension that provides the ability to choose your username when logging in through Geyser to a Java server.

Why get stuck with a username you picked 8 years ago? Or if you share a device with another family member you can now choose different usernames instead of sharing the same account.

Now you can allow your players the ability to choose a username when logging in. The last 5 logins are saved to allow easily switching between recent accounts.

This requires an offline server (for now). Security will need to be provided by a extension on the server like with AuthMe.

Quickstart¶

- Make sure you're running a build of Geyser that supports extensions. A bleeding edge version that does can be found here *(https://github.com/bundabrg/Geyser/releases)*.
- Download GeyserLogin *(https://github.com/bundabrg/GeyserLogin/releases)* and place it into a extensions folder under your Geyser folder. Run Geyser and it will now pop up the following log dialogue when a player connects:

Donations¶

As this is an open source project it is free to use and free to modify. If you do wish to donate then you may use the following link with all funds going into my "Evening Fund".

The Evening Fund is a fund I (bundabrg) have set up for all my open source projects. Anything sent there will be used to help others. I appreciate your contribution, and I thank you for giving me the ability to bring some happiness to others as well.

Contributing¶

Here are some ways that you can help contribute to this project.

New ideas or Bug Reports¶

Need something? Found a bug? Or just have a brilliant idea? Head to the Issues *(https://github.com/Bundabrg/GeyserLogin/issues)* and create new one.

Contributing Code¶

If you know Java then take a look at open issues and create a pull request.

Do the following to build the code:

```
git clone https://github.com/Bundabrg/GeyserLogin
cd GeyserLogin
mvn clean package
```

Contributing Documentation¶

If you can help improve the documentation it would be highly appreciated. Have a look under the `docs` folder for the existing documentation.

The documentation is built using `mkdocs`. You can set up a hot-build dev environment that will auto-refresh changes as they are made.

Requirements¶

- python3
- pip3
- npm (only if changing themes)

Install dependencies by running:

```
pip3 install -r requirements.txt
```

Copyright (C) 2020 GeyserLogin Developers

Dev Environment¶

To start a http document server on `http://127.0.0.1:8000` execute:

```
mkdocs serve
```

Change PDF Theme¶

Edit the PDF theme under `docs/theme/pdf`. Rebuild by doing the following:

```
cd docs/theme/pdf
npm install
npm run build-compressed
```

This will update `pdf.css` under `docs/css/pdf.css`. Rebuilding the docs will now use the new theme.
